

# Prestashop Addon Documentation

## *Module 2P Analytics / Prestashop*

*Compatibility : PrestaShop v1.5 - v1.7*

*Developed by : Dream me up*

*All support requests must be made through the website PrestaShop Addons or  
from website 2P Analytics*

### *Module presentation*

With 2P Analytics, you will be able to view and correct all problems, detect bugs and breakdowns, all slowdowns in your PrestaShop store.

You'll also be able to improve E-commerce performance with a lot of informations about carts and conversions.

Finally you will monitor the activity of your site with many configurable alerts.

### *Installation*

The module can be installed in a few clicks directly from the PrestaShop interface.

During installation, the module will set up several "Override" to function, if the functions are already overloaded in your shop, the module will not be able to install correctly, you will have to be careful not to have override On the following functions :

- Class Hook : Function exec()
- Class Db : Function query()
- Class FrontController : Function run()

### *Module Configuration*

To use the module, you must first register at <https://www.2p-analytics.com>

You will then get an ID (Site ID) in the form "PA-XXXXXXX"

Fill in this identifier in the "Configuration" section of the module, you must have a return "Your configuration has been validated".

⚙️ MODULE CONFIGURATION

\* Website ID

*You first need to register on [www.2p-analytics.com](http://www.2p-analytics.com)*

\* Activate the addon  YES  NO

✔️ 2P Analytics : Your configuration has been validated

*Otherwise, here are the possible cases:*

**ID Invalid site or non-active subscription:**

Either the site ID you entered does not exist, or your free trial is complete, or you have not renewed your subscription.

**"This site has not been authorized" OR "This domain name is not in the authorized list":**

2P Analytics works with a license, you must have configured the correct domain name in the settings of your 2P Analytics Dashboard.

**2P Analytics can not be used on a local site, use a domain accessible from the internet:**

The "classic" license does not authorize a website in development on a local Host, the domain name must be accessed from the Internet.

If you want to use our tool on a website on a local server, you must subscribe to a developer license.

## **Module Use**

There is nothing else to do at the module level, you can just enable and disable it freely from the configuration.

Then go to the online dashboard to see all the statistics:
